## General Comment

To Whom It May Concern:

Please take glyphosate off the shelves and out of our lives. This herbicide seems to be in everything. When tested glyphosate has been found in water, breast milk, honey, other foods and vaccines. Even organic farmers are finding glyphosate on their crops due to the drift which occurs when this herbicide is sprayed .

Based on the research on humans and on animal studies "The World Health Organization has stated glyphosate probably causes cancer." The continuing use of this poison is absurd.

Also, now the weeds are becoming immune to glyphosate, so the application has become heavier.

You have the power to help take this herbicide out of our environment.

" The mission of EPA is to protect human health and the environment. EPA's purpose is to ensure that: all Americans are protected from significant risks to human health and the environment where they live, learn and work; national efforts to reduce environmental risk are based on the best available scientific information; federal laws protecting human health and the environment are enforced fairly and effectively; environmental protection is an integral consideration in U.S. policies concerning natural resources, human health, economic growth, energy, transportation, agriculture, industry, and international trade, and these factors are similarly considered in establishing environmental policy; all parts of society communities, individuals, businesses, and state, local and tribal governments have access to accurate information sufficient to effectively participate in managing human health and environmental risks; environmental protection contributes to making our communities and ecosystems diverse, sustainable and economically productive; and the United States plays a leadership role in working with other nations to protect the global environment."

As you consider the harm glyphosate does to humans, plants and animals , you must take action to remove this poison from our environment.
